Qualification Task Kit

Two practical tasks per role - built to test how you work, not how you interview

16 roles | Development - Design - Marketing - Content - Operations

Submit your work on Instagram

[@realshreyanshsingh](https://www.instagram.com/realshreyanshsingh)

Digital Heroes | digitalheroesco.com

July 2026

Read this first

You have been shortlisted. The next step is a practical task for the role you applied to. Every role in this kit has **two tasks** - **Task A and Task B**. Complete both. They are designed to show how you think and work at a professional level.

The rules

- **Use AI - properly.** ChatGPT, Claude, Gemini, and any other model are fully allowed across both tasks. Use them to learn the concepts you do not know yet, to speed up the parts you do, and to pressure-test your own thinking. We work with these tools every day, so we would rather see how well you direct them than watch you avoid them. Add one short paragraph telling us where you used AI and what you changed afterwards.
- **Make it unmistakably yours.** Many people are working on this exact brief right now. Do not copy another participant, and do not hand in whatever a model gives you on the first prompt. Bring your own angle, your own voice, and your own judgment - the parts that are distinctly you are exactly what we are looking for, and they are what the interview will be built around. A rough submission that is clearly yours beats a polished one that could have come from anyone. Copied or purchased work means immediate disqualification, and we do check.
- **Timeline:** Submit within 3 days of receiving this brief. If you need longer for a genuine reason, tell us before the deadline rather than after it.
- **Do only your role's tasks.** Find your role in the contents list below and complete Task A and Task B for that role only.
- **Send links, not files.** Put everything in a Google Drive folder set to "anyone with the link can view", named **Role_YourFullName**, and send that single link. Broken or private links count as no submission.
- **Walkthroughs are not optional.** Where a task asks for a Loom or screen recording, submissions without it are not reviewed. Two to three minutes is enough.
- **Your work stays yours.** Submissions are used to evaluate you. If we ever want to publish or reuse your work, we will ask you first and credit you.
- **Assumptions are part of the test.** Where a brief is ambiguous, make a sensible call and state the assumption in your submission. Resourcefulness counts.

HOW TO SUBMIT

Send your completed work by Instagram direct message to [@realshreyanshsingh](https://www.instagram.com/realshreyanshsingh). That is the only submission channel.

Follow the account before you send it. If you are not following us, your message lands in our Requests folder, where we are unlikely to see it - and we will not be able to reply, add you to our talent database, or move you to the next round. The connection is what makes everything after this possible, so please make sure it is in place before you submit.

Tap here to open the account: [instagram.com/realshreyanshsingh](https://www.instagram.com/realshreyanshsingh)

What happens after you submit

Every submission is reviewed by our team, and shortlisted candidates are invited to an interview where you will walk through your work and the thinking behind it. That is why your own voice in the task matters so much - the conversation starts from what you made.

We receive a very large volume of applications, so please be patient with us. Reviews take time and we work through them in order. Our team will reach out to you on Instagram, and you may be asked to fill in a short form before your interview is scheduled. There is no need to send repeated follow-up messages - as long as you are following the account, we can reach you.

Roles in this kit

01 Project Manager	07 E-commerce Developer (Shopify)	13 Copywriting
02 Business Development (Sales)	08 UI/UX Design	14 Content Writing
03 Software Development (SDE)	09 Human Resources (HR)	15 Client Success Representative
04 Full Stack Development	10 Social Media Marketing	16 Graphic Design
05 Web Development	11 Content Creator	
06 Mobile App Developer	12 Search Engine Optimization (SEO)	

We are not looking for perfection. We are looking for judgment, craft, and follow-through. Digital Heroes | digitalheroesco.com

ROLE 01 / 16

Project Manager

What this tests: Planning under pressure, scope judgment, and client communication on real agency delivery.

TASK A - Recover a project that is over budget and late

A retainer client's build is 40% over budgeted hours and 3 weeks behind. The client has stopped approving milestones. Two of the four people on the project are also staffed on another launch. You inherit it today.

- a) Produce a recovery plan: what ships, what gets cut, what gets renegotiated, and the revised critical path.
- b) Do the margin analysis: show the commercial impact of each option you considered, including the option of absorbing the overrun.
- c) Write the client conversation - the email that reopens milestone approvals without conceding the account.
- d) Define the controls you would put in place so this does not recur: cadence, thresholds, and the exact signal that triggers escalation.

Deliverables

- Recovery plan
- Margin analysis
- Client email
- Controls document

How we score it

Evaluation criterion	Weight
Recovery logic and prioritization	30
Commercial reasoning	25
Client handling	25
Preventive controls	20
Total	100

TASK B - Design the delivery system

The agency runs 5 concurrent client projects across development, design, and marketing pods, in three time zones.

- a) Design the delivery operating system: intake, kickoff, cadence, status reporting, and closure - as a document a new PM could follow on day one.
- b) Build a RACI for a typical project and an escalation matrix with defined response times.
- c) Specify the weekly client status report: exact format, what is included, what is deliberately excluded, and why.
- d) Define 5 delivery health metrics and the threshold at which each one triggers action.

Deliverables

- Delivery SOP document
- RACI + escalation matrix
- Status report template
- Metrics definition

How we score it

Evaluation criterion	Weight
System completeness and usability	35
RACI and escalation design	25
Reporting judgment	20
Metrics quality	20
Total	100

ROLE 02 / 16

Business Development (Sales)

What this tests: Prospect research, outbound craft, objection handling, and commercial instinct.

TASK A - Design a repeatable outbound system

Digital Heroes sells Shopify development, web development, and performance marketing into the US, UK, and Australia. You own new business.

- a) Segment the market into 3 defensible segments and define an ICP, a core pain, and a distinct value proposition for each.
- b) Build a full sequence for the strongest segment: 5 touches across email and LinkedIn, including the breakup message.
- c) Model the funnel: prospects contacted, reply rate, meeting rate, close rate, average deal value - and show what it takes to hit a defined quarterly number. State your assumptions.
- d) Define the qualification framework you would run discovery calls against, and the disqualification criteria you would hold the line on.

Deliverables

- Segment and positioning document
- Full sequence
- Funnel model with assumptions
- Qualification framework

How we score it

Evaluation criterion	Weight
Segmentation and positioning	30
Sequence craft	25
Funnel modeling realism	25
Qualification discipline	20
Total	100

TASK B - Win a competitive deal

A US retail brand with 4 Shopify stores is evaluating three agencies for a consolidation and rebuild. Their stated budget is well below what the scope requires. The decision-maker is the COO; the blocker is an in-house developer who wants to keep the work.

- a) Write your deal strategy: how you win the COO, how you neutralize the in-house blocker, and what you refuse to do.
- b) Structure the commercial offer: how you would scope and phase it so the first engagement fits their budget without underselling the full programme. Use relative pricing or ranges - no need for real numbers.
- c) Outline the proposal: section by section, with the argument each section has to land.
- d) Write your negotiation plan: your concession ladder, your walk-away conditions, and the two questions you must get answered before you send anything.

Deliverables

- Deal strategy document
- Commercial structure
- Proposal outline
- Negotiation plan

How we score it

Evaluation criterion	Weight
Strategic read of the deal	30
Commercial structuring	25
Proposal argument	20
Negotiation discipline	25
Total	100

ROLE 03 / 16

Software Development (SDE)

What this tests: API design, correctness, error handling, and shipping something that actually runs.

TASK A - Production-grade Page Pulse

Build the same URL-audit service, but built to run in production rather than to demo.

- a) Implement the audit service with input validation, request timeouts, concurrency limits, and structured error responses.
- b) Add caching so repeat audits of the same URL within a window are served without refetching, and make the window configurable.
- c) Add rate limiting per client and structured logging with request IDs.
- d) Write a meaningful test suite and wire up CI that runs it on every push.

Deliverables

- Public GitHub repo with tests and CI config
- Live deployed link
- README with API contract

How we score it

Evaluation criterion	Weight
Correctness and resilience	30
Caching and rate limiting design	20
Test coverage and CI	25
Code quality and structure	25
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

TASK B - Design it for scale

The service now has to handle 10,000 audits per day, with bursts of 500 concurrent requests, and a customer-facing SLA on response time.

- a) Write the architecture document: components, data flow, queueing strategy, and where state lives. Include a diagram.
- b) Justify your key technology choices, and name the alternative you rejected for each and why.
- c) Identify the three most likely failure modes at this scale and the mitigation for each.
- d) Define what you would monitor and alert on, and how you would roll back a bad deploy.

Deliverables

- Architecture document with diagram
- Technology decision record
- Failure mode analysis
- Observability and rollback plan

How we score it

Evaluation criterion	Weight
Architecture soundness	30
Tradeoff reasoning	25
Failure analysis	25
Operational thinking	20
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

ROLE 04 / 16

Full Stack Development

What this tests: The complete loop: frontend, backend, data model, auth, and deployment of one coherent product.

TASK A - Build a lead platform, not a lead form

Build a lead management application that a small sales team could actually use.

- a) Public capture form plus an authenticated application with at least two roles - admin and member - and enforced permissions on both client and server.
- b) Lead lifecycle: status pipeline, assignment to a user, notes with timestamps, and an activity trail.
- c) A JSON API for leads with pagination, filtering, and proper status codes - documented in the README.
- d) Automated tests covering auth rules and at least two core flows, plus deployment on any free tier.

Deliverables

- Public GitHub repo with tests
- Deployed application + credentials for each role
- API documentation

How we score it

Evaluation criterion	Weight
Architecture and data modeling	30
Auth and permission correctness	25
API design and documentation	20
Test coverage and deployment	25
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

TASK B - Inherit and improve

You are handed a working but poorly built codebase with no tests, business logic inside route handlers, direct database calls from the frontend, and secrets in the repo. It serves real customers and cannot go down.

- a) Write the assessment: what you would fix, in what order, and the risk of leaving each issue in place.
- b) Produce a migration plan that never requires a big-bang rewrite - name what ships in week 1, month 1, and quarter 1.
- c) Demonstrate one refactor concretely: take a realistic bad code sample you write yourself, refactor it, and explain what improved.
- d) Define the engineering standards you would introduce and how you would get a resistant team to adopt them.

Deliverables

- Assessment document
- Phased migration plan
- Before/after refactor with commentary
- Standards proposal

How we score it

Evaluation criterion	Weight
Prioritization and risk judgment	30
Migration realism	25
Refactor quality	25
Team and adoption thinking	20
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

ROLE 05 / 16

Web Development

What this tests: Hand-built responsive layout, semantic code, performance discipline, and visual finishing.

TASK A - Build a production marketing site

Build a multi-page marketing site for a fictional B2B software company. No page builders.

- a) At least 4 pages - home, product, pricing, contact - with shared components and a structure a content team could extend without touching layout code.
- b) Implement semantic HTML, correct heading hierarchy, and full keyboard accessibility.
- c) Add valid structured data (Organization, Product or Service, FAQPage where appropriate) and correct meta and Open Graph tags on every page.
- d) Hit Core Web Vitals in the green on mobile and document how - attach Lighthouse and PageSpeed evidence.

Deliverables

- Live URL
- Public GitHub repo
- Performance and schema evidence

How we score it

Evaluation criterion	Weight
Architecture and component structure	30
Accessibility and semantics	25
Structured data and meta correctness	20
Core Web Vitals results	25
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

TASK B - Diagnose a slow site

Pick any real, publicly accessible website that performs badly on mobile - not one of ours, and not one you built.

- a) Run a full performance diagnosis: field and lab data, the specific bottlenecks, and what is actually causing each one.
- b) Prioritize the fixes by impact against implementation cost, and be explicit about what you would not bother fixing.
- c) Rebuild one section of that page as a standalone demo proving your recommendation, and show the before and after numbers.
- d) Write the summary as you would send it to a non-technical client.

Deliverables

- Diagnosis report with evidence
- Prioritized fix list
- Rebuilt section demo + metrics
- Client-facing summary

How we score it

Evaluation criterion	Weight
Diagnostic accuracy	30
Prioritization judgment	25
Proof of improvement	25
Client communication	20
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

ROLE 06 / 16

Mobile App Developer

What this tests: List/detail architecture, API integration, state handling, and UI polish in Flutter or React Native.

TASK A - Build an offline-first app

Build a 4-screen order management app in Flutter or React Native against a mock API you create.

- a) Screens: list with filtering, detail, status update flow, and a settings or profile screen.
- b) Use a real state management approach and justify the choice in your README - not ad hoc setState scattered through widgets.
- c) Offline-first: local persistence, an update queue that syncs when connectivity returns, and clear conflict handling.
- d) Include tests for the sync logic and ship a signed build or Expo link.

Deliverables

- Public GitHub repo with tests
- Installable build or Expo link
- README with architecture rationale

How we score it

Evaluation criterion	Weight
Architecture and state management	30
Offline and sync correctness	30
UI quality and edge states	20
Tests and build quality	20
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

TASK B - Review and raise the bar

You are joining a team whose app ships slowly, crashes on older devices, and has a 4MB main bundle.

- a) Write a technical review framework: exactly what you would inspect, in what order, and what each finding would tell you.
- b) Using any real app codebase you can access - including your own past work - produce a written review with concrete findings.
- c) Propose the release process you would introduce: branching, testing gates, staged rollout, and crash monitoring.
- d) Define the performance budget you would hold the team to and how you would enforce it.

Deliverables

- Review framework
- Written code review with findings
- Release process proposal
- Performance budget

How we score it

Evaluation criterion	Weight
Depth of technical review	30
Concreteness of findings	25
Release process design	25
Performance discipline	20
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

ROLE 07 / 16

E-commerce Developer (Shopify)

What this tests: Liquid fundamentals, theme architecture, customizer schema design, and no-app problem solving.

TASK A - Build a merchant-editable theme system

On a Shopify development store, build a section system a non-technical merchant could run a storefront with.

- a) Build at least 3 custom sections that share a coherent design language and settings pattern, with blocks where blocks make sense.
- b) Drive at least one piece of content from metafields, and explain the data model you chose.
- c) Implement one genuine merchandising feature without any app - for example variant-aware bundles, dynamic delivery estimates, or a custom swatch system.
- d) Keep the theme fast: document your performance approach and show before and after evidence.

Deliverables

- Store preview URL + password
- All section and snippet files
- Technical write-up with metafield model and performance evidence

How we score it

Evaluation criterion	Weight
Section architecture and reusability	30
Metafield and data modeling	20
Feature complexity handled without apps	25
Performance discipline	25
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

TASK B - Audit a live store

Choose any real Shopify store you do not own and are not affiliated with.

- a) Audit it on three axes: technical performance, conversion experience, and theme code quality where visible.
- b) Produce a prioritized fix list with an estimated effort and expected impact for each item, and be explicit about your confidence level.
- c) Prototype one fix - build the improved version as a section or standalone demo and show the difference.
- d) Write the recommendation as you would present it to a merchant who is not technical and is protective of their store.

Deliverables

- Audit report
- Prioritized fix list with effort and impact
- Prototype of one fix
- Merchant-facing summary

How we score it

Evaluation criterion	Weight
Audit depth and accuracy	30
Prioritization and impact reasoning	25
Quality of the prototype	25
Merchant communication	20
Total	100

LIVE BUILD REQUIREMENT

Because this task produces a live website or public page, add a visible credit line in the footer reading "Built for Digital Heroes Training Task", linked to digitalheroesco.com, and include the live URL with your submission. This is how we verify the build is yours.

ROLE 08 / 16

UI/UX Design

What this tests: Critique ability, visual craft, responsive thinking, and design communication.

TASK A - Design a product flow

Design the onboarding and first-session experience for StoreLens, a Shopify analytics product for small merchants. The core problem: merchants sign up, see a dashboard they do not understand, and never return.

- a) Map the current-state problem and your intended flow before you design a single screen - include the decision points and the failure paths.
- b) Design at least 6 connected screens at high fidelity, covering the empty state, the first meaningful action, and the return visit.
- c) Build a clickable prototype demonstrating the primary path.
- d) Show your reasoning on one screen you iterated: the version you rejected, the version you kept, and why.

Deliverables

- Figma link with flow map, screens, and prototype
- Written rationale including the rejected iteration

How we score it

Evaluation criterion	Weight
Flow and problem framing	30
Visual and interaction craft	30
Prototype quality	20
Design reasoning and iteration	20
Total	100

TASK B - Build design system foundations

The agency ships client work through 4 designers and 6 developers, and every project reinvents its own buttons.

- a) Define the foundations: type scale, colour system with semantic naming, spacing, elevation, and radius - with the rules for when each is used.
- b) Build a component set of at least 8 components with variants and states, structured for reuse in Figma.
- c) Write the developer handoff document: naming conventions, token structure, and how a developer should interpret the file.
- d) Explain how you would get a team that likes its own habits to actually adopt this.

Deliverables

- Figma design system file
- Handoff documentation
- Adoption plan

How we score it

Evaluation criterion	Weight
Foundation rigor	30
Component architecture	30
Handoff clarity	25
Adoption thinking	15
Total	100

ROLE 09 / 16

Human Resources (HR)

What this tests: High-volume screening design, structured evaluation, candidate empathy, and process metrics.

TASK A - Build the hiring engine

The agency is 50+ people and plans to add 25 across development, design, and marketing in the next two quarters, hiring largely from a high-volume applicant pool.

- a) Design the end-to-end hiring system: sourcing mix, screening, structured interview loops per function, decision-making, and offer.
- b) Build the structured interview kit for one technical and one non-technical role: competencies, questions, and scoring anchors.
- c) Define the hiring metrics you would run the function on, with targets and the diagnosis path when a metric moves the wrong way.
- d) Address quality control: how you keep the bar consistent across different interviewers.

Deliverables

- Hiring system document
- Two structured interview kits
- Metrics framework
- Bar-consistency plan

How we score it

Evaluation criterion	Weight
System design completeness	30
Interview kit rigor	25
Metrics and diagnosis	25
Consistency mechanisms	20
Total	100

TASK B - Handle the hard part of the job

Two situations, both real in a fast-growing agency: a high performer whose behaviour is damaging their team, and a well-liked employee who is quietly underdelivering and knows it.

- a) Write a performance management framework the agency could actually run: expectations, review cadence, documentation, and escalation - proportionate to a 50-person company, not a 5,000-person one.
- b) Write the actual conversation script for both situations - what you open with, what you must say, and what you must not.
- c) Write the follow-up documentation for one of them, as it would go on file.
- d) Define what you would put in place so managers handle these earlier and without you.

Deliverables

- Performance management framework
- Two conversation scripts
- Follow-up documentation
- Manager enablement plan

How we score it

Evaluation criterion	Weight
Framework proportionality and usability	30
Conversation quality	30
Documentation rigor	20
Enablement thinking	20
Total	100

ROLE 10 / 16

Social Media Marketing

What this tests: Analytical audit skill, content strategy, hook writing, and presenting a plan.

TASK A - Own the growth strategy

You are responsible for social growth across Instagram, LinkedIn, and YouTube for an agency selling development and marketing services to US, UK, and Australian businesses.

- a) Build a 90-day strategy: content pillars, platform-specific formats, posting cadence, and how each platform contributes to pipeline rather than vanity metrics.
- b) Analyse 3 competing agencies: what is working for them, what is not, and the positioning gap you would take.
- c) Model the numbers: reach, engagement, profile visits, leads - with the assumptions that connect content output to business outcome.
- d) Specify the production system: who makes what, in what sequence, and the weekly operating rhythm.

Deliverables

- 90-day strategy
- Competitive analysis
- Growth model with assumptions
- Production system

How we score it

Evaluation criterion	Weight
Strategic coherence	30
Competitive insight	25
Model realism and business linkage	25
Operational plan	20
Total	100

TASK B - Run a launch

The agency is launching a new Shopify performance audit service. You have organic social as your primary channel and a small paid budget.

- a) Design the launch campaign: the narrative arc, the content sequence across platforms, and the timeline from tease to conversion.
- b) Write the three highest-leverage assets in full - one long-form caption, one reel script, and one carousel outline with copy for each slide.
- c) Specify the paid layer: what you would boost, the audience logic, and the creative you would test against each other.
- d) Define what success looks like at 7, 30, and 90 days - and the point at which you would kill the campaign.

Deliverables

- Campaign plan and timeline
- Three finished assets
- Paid strategy
- Measurement and kill criteria

How we score it

Evaluation criterion	Weight
Campaign architecture	30
Asset craft	30
Paid reasoning	20
Measurement discipline	20
Total	100

ROLE 11 / 16

Content Creator

What this tests: The full creation loop: scripting, shooting, editing, and packaging finished short-form video.

TASK A - Build a content engine

You are responsible for short-form output that has to run continuously, not as a one-off burst.

- a) Produce a 3-video series that works standalone and as a sequence - fully scripted, shot, edited, and captioned.
- b) Document the system behind it: idea capture, scripting template, shoot setup, edit conventions, and the turnaround time per video.
- c) Define your hook library approach: how you generate, test, and retire hooks rather than guessing each time.
- d) Specify what you measure per video and how a losing video changes the next one.

Deliverables

- Three finished videos
- Production system document
- Hook methodology
- Measurement approach

How we score it

Evaluation criterion	Weight
Video craft across the series	30
System repeatability	25
Hook methodology	25
Measurement and iteration	20
Total	100

TASK B - Strategy for a large channel

A YouTube presence with a multi-million subscriber base is publishing consistently but converting poorly into business outcomes.

- a) Analyse the format problem: which content types serve reach, which serve trust, and which serve conversion - and what the mix should be.
- b) Write 10 title and thumbnail concepts for the highest-value content type, and explain the pattern behind them.
- c) Design the funnel from video to business outcome: the specific path a viewer takes and where it currently breaks.
- d) Produce one finished video or a complete production-ready script demonstrating your recommended direction.

Deliverables

- Format analysis
- 10 title and thumbnail concepts with rationale
- Funnel design
- Finished video or full script

How we score it

Evaluation criterion	Weight
Strategic analysis	30
Packaging craft	25
Funnel thinking	25
Execution quality	20
Total	100

ROLE 12 / 16

Search Engine Optimization (SEO)

What this tests: Audit prioritization, keyword-intent mapping, on-page craft, and awareness of AI-era search.

TASK A - Own an SEO programme

You are taking over organic growth for an agency site competing in the US, UK, and Australian markets.

- a) Run a full audit of digitalheroesco.com across technical, on-page, content, and internal linking - with findings prioritized by impact against effort.
- b) Build the keyword and content architecture: clusters, intent mapping, target page types, and internal linking logic.
- c) Write a 90-day roadmap with sequenced work, dependencies, and what you would expect to move by when - stating your assumptions explicitly.
- d) Define measurement: the metrics you would report, the ones you would ignore, and how you would separate your impact from market noise.

Deliverables

- Full audit with prioritization
- Content architecture
- 90-day roadmap
- Measurement framework

How we score it

Evaluation criterion	Weight
Audit depth and prioritization	30
Architecture quality	25
Roadmap realism	25
Measurement rigor	20
Total	100

TASK B - Strategy for AI search

A growing share of buying research now happens inside AI answers rather than search results pages.

- a) Run a structured visibility test across ChatGPT, Perplexity, and Google's AI results for at least 8 commercial queries relevant to a Shopify agency. Document your method so someone else could repeat it.
- b) Analyse what the cited sources have in common - format, structure, entity presence, third-party corroboration.
- c) Build the strategy: entity development, structured data, content formats, and off-site signals, sequenced by leverage.
- d) Rewrite one real page from digitalheroesco.com to be maximally citable, and explain every change you made.

Deliverables

- Documented visibility test with evidence
- Citation pattern analysis
- Sequenced strategy
- Rewritten page + change rationale

How we score it

Evaluation criterion	Weight
Test methodology	25
Quality of pattern analysis	25
Strategic sequencing	25
Execution on the rewrite	25
Total	100

ROLE 13 / 16

Copywriting

What this tests: Headline craft, persuasion technique, and adapting one message across formats.

TASK A - Build the messaging, then the copy

The agency's positioning is generic: it says the same things every other agency says.

- a) Build a messaging framework: audience, the problem in their words, the promise, the proof, the differentiators, and the objections - with the reasoning behind each choice.
- b) Write a full long-form landing page from that framework - every section, in order, ready to hand to a designer.
- c) Produce a voice guide: what this brand sounds like, what it never says, and three before-and-after rewrites demonstrating it.
- d) Name the one claim you would fight to keep and the one you would remove even though clients like it.

Deliverables

- Messaging framework
- Full landing page copy
- Voice guide with rewrites
- Claims argument

How we score it

Evaluation criterion	Weight
Strategic messaging quality	30
Long-form copy craft	30
Voice definition	20
Editorial judgment	20
Total	100

TASK B - Write a sequence that converts

A lead downloads a Shopify audit checklist. They are interested but not ready.

- a) Write a 5-email nurture sequence: the strategic role of each email, the subject lines, and the full body copy.
- b) Write the sales page or VSL script that the sequence drives to - full script, not an outline.
- c) Specify what you would A/B test first, second, and third, and what result would change your mind about the sequence.
- d) Handle the objection you find hardest in this offer, in copy, wherever you think it belongs.

Deliverables

- 5-email sequence
- Sales page or VSL script
- Test plan
- Objection treatment

How we score it

Evaluation criterion	Weight
Sequence strategy	30
Long-form persuasion craft	30
Testing rigor	20

ROLE 14 / 16

Content Writing

What this tests: Research depth, structure, SEO execution, and readable expert voice from a real brief.

TASK A - Write something that deserves to rank

Pick any commercially relevant topic for a Shopify and digital marketing agency where the existing top results are shallow. Say why you picked it.

- a) Analyse what currently ranks and name specifically what is missing or wrong in it.
- b) Write a 2,000+ word piece that fills that gap - with an original angle, real specificity, and examples rather than generalities.
- c) Handle E-E-A-T deliberately: show how the piece demonstrates experience and how it would be corroborated.
- d) Include full on-page treatment: meta, headings, schema recommendation, internal linking, and the FAQ block.

Deliverables

- Gap analysis
- Full article
- On-page treatment
- E-E-A-T rationale

How we score it

Evaluation criterion	Weight
Originality and depth	30
Competitive gap analysis	25
Writing craft	25
On-page execution	20
Total	100

TASK B - Plan a content programme

The agency publishes inconsistently and nothing compounds.

- a) Design a 10-piece content cluster: pillar and supporting pieces, intent mapping, and the internal linking structure between them.
- b) Write full briefs for 2 of the pieces - detailed enough that another writer could execute without asking you questions.
- c) Define the editorial standards: research requirements, sourcing rules, the review process, and how AI may and may not be used.
- d) Specify how you would measure whether the cluster is working, and when you would kill or rewrite a piece.

Deliverables

- Cluster plan with linking structure
- Two full content briefs
- Editorial standards
- Measurement and pruning policy

How we score it

Evaluation criterion	Weight
Cluster architecture and intent mapping	30
Brief quality	30
Editorial standards	20
Measurement thinking	20
Total	100

ROLE 15 / 16

Client Success Representative

What this tests: Tone, de-escalation, boundary-setting, commercial instinct, and on-camera presence.

TASK A - Design the client success function

The agency has 30+ active clients, no formal success motion, and churn that nobody sees coming.

- a) Design the programme: onboarding, the ongoing cadence, review formats, and the handoff points between delivery and success.
- b) Build a client health scoring model: the inputs, the weighting, and the action triggered at each score band.
- c) Write the churn-risk playbook: the signals, the intervention sequence, and what you do when intervention fails.
- d) Define the expansion motion: how you identify and open upsell conversations without damaging trust.

Deliverables

- Programme design
- Health scoring model
- Churn playbook
- Expansion motion

How we score it

Evaluation criterion	Weight
Programme completeness	30
Health model rigor	25
Churn playbook practicality	25
Expansion judgment	20
Total	100

TASK B - Save an account

A retainer client six months in is unhappy: two missed deadlines, a change of contact on their side, and results below what was promised. They have asked for a call to "discuss the relationship". They represent meaningful recurring revenue.

- a) Write your preparation: what you need to know before the call, what you will concede, and what you will not.
- b) Write the recovery plan you would bring to the call - specific commitments, not reassurances.
- c) Record a Loom running the first 4 minutes of that call as if live.
- d) Write the follow-up email and define what you would put in place so the next account does not get here.

Deliverables

- Call preparation
- Recovery plan
- Loom of the live call
- Follow-up email and preventive measures

How we score it

Evaluation criterion	Weight
Preparation and commercial judgment	25
Quality of the recovery plan	25
Live handling	30
Follow-through and prevention	20
Total	100

ROLE 16 / 16

Graphic Design

What this tests: Visual identity craft, layout discipline, format range, and design rationale.

TASK A - Build a full brand system

Create the complete visual identity for a fictional B2B software company: Ledgerline, an accounting automation product for small businesses.

- a) Develop the identity: logo system with all lockups and clear-space rules, colour with accessible contrast pairings, type scale, iconography direction, and photography or illustration direction.
- b) Produce a brand guidelines document a third party could follow without asking you questions - including the misuse rules.
- c) Apply the system across at least 5 surfaces spanning digital and print: website hero, pitch deck slide, social template, one-pager, and one physical item.
- d) Explain the strategic reasoning: what this identity communicates, who it is for, and what visual territory you deliberately avoided.

Deliverables

- Brand guidelines document
- 5 applied surfaces
- Strategic rationale
- Source file link

How we score it

Evaluation criterion	Weight
Identity craft and coherence	30
Guidelines rigor	25
Application range	25
Strategic reasoning	20
Total	100

TASK B - Audit and redirect a real brand

Your subject is Digital Heroes' own visual presence - the website at digitalheroesco.com and the social accounts.

- a) Audit the current visual identity honestly: what holds together, what does not, and what it currently signals to a US or UK buyer evaluating agencies.
- b) Propose a visual direction with a rationale - including one direction you considered and rejected, and why.
- c) Execute 5 pieces demonstrating the direction: a website hero, a social template set, a pitch deck cover and one content slide, a proposal cover, and an ad creative.
- d) Write the rollout plan: what changes first, what can wait, and how you keep consistency across a 50-person team while it happens.

Deliverables

- Visual audit
- Direction proposal including the rejected option
- 5 executed pieces
- Rollout plan

How we score it

Evaluation criterion	Weight
Honesty and accuracy of the audit	25
Strength of the proposed direction	30
Execution quality	30
Rollout practicality	15
